Dear Mr. Hritcko:

As one of the largest and most efficient gas and oil fired electric generators in Connecticut (Winter rating at 267.76 MW for Unit 1, 268.43 MW for Unit 2, and 273.27 MW for Unit 3) Lake Road Generating Co. L.P., (LRGC) seeks to continue refinement of operations to reduce costs while maintaining clean air emissions, facility reliability, fuel diversity, and safe operations. Consequently, LRGc supports the delivery of additional supply of natural gas into Connecticut and the region as proposed by Broadwater Energy to reduce fuel costs and price volatility. LRGc also seeks to enter into non-binding discussions with Shell Trading to consider potential gas supply and storage arrangements that would provide for additional supply diversity through the storage of liquefied natural gas (LNG) to augment LRGc's existing natural gas supply and oil fired capability. The purpose of these discussions would be to consider if and how a portion of Broadwater's LNG storage and delivery capacity of natural gas could serve LRGc, which would alleviate the need to use more costly and/or less environmentally friendly fuels for facility operation.

Please contact me at your earliest convenience to schedule a meeting to discuss this matter. My direct telephone number is (860) 779-8350.

Thank you for your attention.

Very truly yours,

James T. Carlton
